ABSTRACT

Documentation of the Environmental Data Bases

The Environmental Data Bank (EDB) represents an effort to compile a comprehensive listing of environmentally-oriented data within one convenient source. The data were collected with the aid of the FAA Regional Offices and include airport-specific information regarding the existence of such things as land acquisition programs or other such noise control actions in effect at each of the U.S. airports listed as of March 1979. FAA Form 1050-5 (Volumes I and II, Appendix A) summarizes those kinds of data which may be listed (if applicable) at each airport.

The individual airport data themselves are arranged in the alphabetical order of the airport's "location indicator" (LOCID), by FAA region. These data may not reflect all U.S. airports having significant environmental information, as we have only indicated those data here that have been reported to us. This EDB may be useful by providing a sense of the extent to which environmentally-related activities have affected approximately 475 of our Nation's airports.

Briefly, the EDB is organized into four individual volumes:

Volume I - User's Manual gives detailed information about the content and use of the data base. A068 171

Volume II - Systems Manual contains a description of the system and programs that support the use and management of the data within the file. A068 172

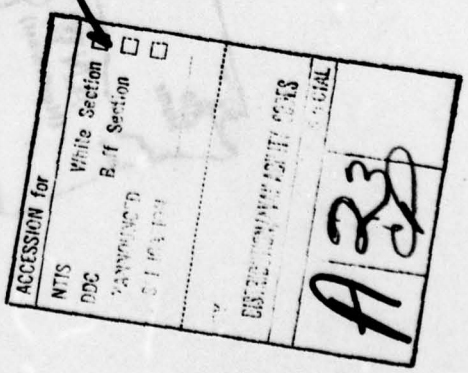

Volume III - Airport Environmental Data Manual presents site-specific information for each airport included in the data base. A068 836 (cont of I-1)

Volume IV - Airport Supplemental Information Manual contains supplemental data of special environmental conditions and/or problems (not provided for on Form 1050-5) for each airport included in the data base. A068 173

Consistent with the format and use of the U.S. airports' EDB, an International Environmental Data Bank (IEDB) was developed through information provided by the International Civil Aviation Organization (ICAO). This international data, as documented in the IEDB volume, is a subset of the larger environmental data file and is available separately. The IEDB volume contains airport-specific information for approximately 110 foreign airports.

It is intended that subsequent updates of all of these documents will be produced as required by changing circumstances.

JOHN E. WESLER

Appendix A Data Analysis and Correlation A- 1

INTRODUCTION

VOLUME III

INTRODUCTION

Volume III of the EDB contains information directly obtainable from the items contained in FORM 1050-5. This information is presented in a computer readout format, with airports listed alphabetically by region, airport name, and location identifier (LOCID).

In addition to the computer readout provided for each airport, the following are included:

A. Diagram of the runway configuration of the airport;

B. Noise sensitive areas located within either a 5 or a 10-mile radius of the airport; and

C. A section giving basic airport statistics.

A legend defining symbols and abbreviations used in the diagrams and statistical sections of this volume is located on the following page.

Appendix A of this volume contains an analysis of correlations of the data contained in the EDB. Included in this section are graphs giving information on frequencies and trends.

Legend

Runway configuration.

Developed area: man-made features.

Approximate noise sensitive areas: developed areas within NEF-30 contour taken from existing studies.

Very approximate noise sensitive areas: developed areas within estimated NEF-30 contour (using distances to approximate NEF contours).

Freeway or Interstate Highway.

River, lake or bay (water).

5 M, 10 M — 5-mile radius or 10-mile radius from the center of runway(s).

Airport Statistics

Site No. - Airport number assigned by FAA Office of Airports Programs (AAP-730) for identification.

State - Standard two-letter abbreviation of the state where the airport is located.

City - Nearest city or town which the airport normally serves.

Air Traffic Tower - Yes or no.

Fire-Rescue Squad on Field - Yes or no; if yes, show CFR 139 Index.

- A - Aircraft not more than 90 feet long.
- B - Aircraft more than 90 and not more than 126 feet long.
- C - Aircraft more than 126 and not more than 160 feet long.
- D - Aircraft more than 160 and not more than 200 feet long

E - Aircraft more than 200 feet long.
L - Limited operation certificate - no prescribed CFR.

Acreage - Total number of acres of land located within the airport boundary.

Daily Operation - Daily operation for scheduled air carrier or GA.

Population - Population within 5 or 2 mile radius from the airport.

Exposure Index - Population multiplied by daily operation in millions.

Fixed Base Operator - Yes or no.

Type of Operations/Aircraft Type -

01 - Scheduled air carrier jet operations.
02 - GA jet operations are likely.
03 - GA jet operations are unlikely.

A - 4 engine jet and larger.
B - 2 and 3 engine jets & 4 engine prop transports.
C - Transport type twin-engine piston and business jets.
D - Light twin-engine prop and high performance single engine aircraft.
E - Light single-engine piston aircraft.

Elevation - Airport elevation in feet above mean sea level (MSL).

Latitude and Longitude - Airport Reference Point for latitude and longitude.

Runway/Length/Pavement Type -
Runway identification number followed by physical length. Show pavement type as:

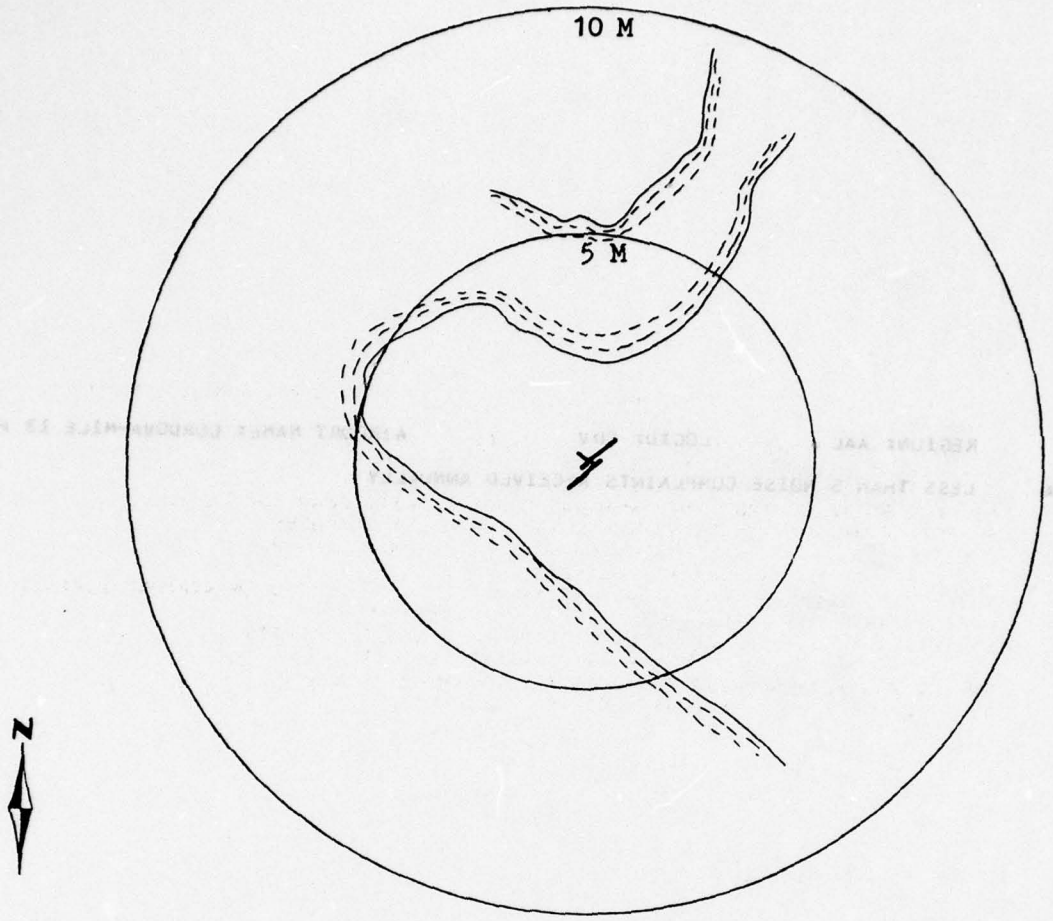

ASPH - Asphalt
CONC - Concrete
GRVL - Gravel, Sand, and Cinders
TURF - Sod

APPENDIX A

DATA ANALYSIS AND CORRELATION

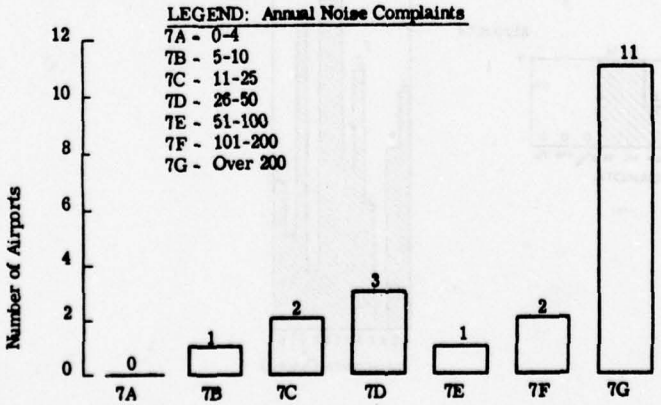

The following text and histograms present fundamental bi-variate analyses of several key data elements contained in the EDB. The material concentrates on frequency of occurrence of data elements, leaving more complex statistical work to interested users. The EDB is structured by airport; therefore, if the record for each airport is thought of as a "case" in a "case file," a researcher may perform numerous statistical analyses to determine correlations among the data elements or "variables" in the file.

Analysis of trends (time-series studies) are not possible because the file contains data from the present only. If a user wished to copy the file at the end of each year, it would be possible after several years to conduct trend analyses.

1. Noise Complaints and Noise-Monitoring System

An analysis of the correlation between noise complaints received annually and the use of noise-monitoring systems reveals that 13 of the 20 noise-monitoring systems in the nation operate at airports receiving more than 50 noise complaints annually. The other 7 noise-monitoring systems are in service at airports receiving less than 50 annual noise complaints.

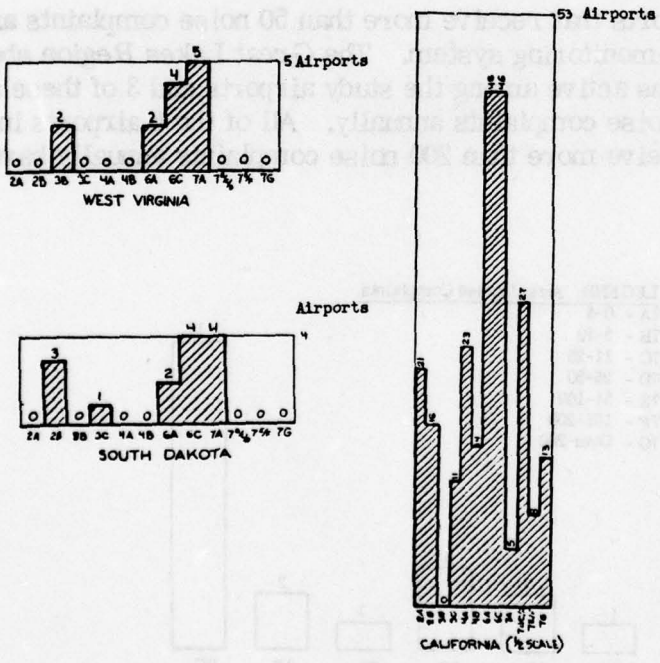

There are 69 other airports that receive more than 50 noise complaints annually that do not have a noise-monitoring system. The Great Lakes Region shows 6 noise-monitoring systems active among the study airports, and 3 of these airports received more than 50 noise complaints annually. All of the 6 airports in the Eastern Region that receive more than 200 noise complaints annually have noise-monitoring systems.

FREQUENCY OF NOISE COMPLAINTS AT AIRPORTS WITH NOISE-MONITORING SYSTEMS, NATIONWIDE

A state-by-state examination of airport environmental data reveals a wide variation in the extent to which aviation activities impact on the comfort and good will of the residents of each state. For example, South Dakota and West Virginia residents typically register fewer than 4 aviation-noise complaints annually for each of the airports studied in those states, while California has 13 airports, each of which receive over 200 complaints annually. Five states (Alaska, Kansas, Idaho, Wyoming, and New Mexico) have one-half or more of their airports located entirely remote from residential areas, while 18 states and Washington, D. C. (including such relatively less densely populated states as Utah, Colorado, Maine, and Nebraska) are found to have residential areas adjacent to all their airports (see graphs "in Part 6" in the next section).

Nineteen states have no airports receiving as many as 50 noise complaints annually, while 9 states have 3 or more such airports.

2. Frequency Analysis of Key Data Elements

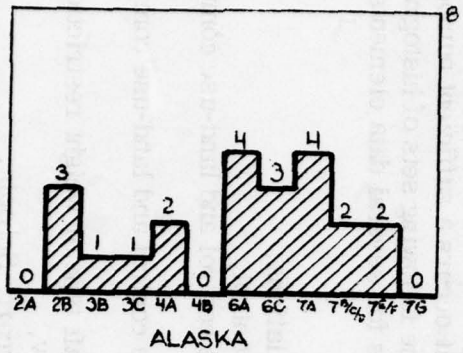

The EDB allows an interested user to do more than retrieve information. Because the data were gathered uniformly, it is possible to compare responses to FAA Form-1050-5 among airports within a region or between regions. Using subsets of the data base, a researcher might perform statistical analyses with the data. For example, using each airport as an individual case, a correlation matrix could be formed by calculating bi-variate correlation coefficients for a group of restriction codes. A researcher could determine if soundproofing programs by schools (Code 2C1), houses and apartment buildings (2C3), or office buildings (2C4) are highly correlated with the annual number of noise complaints. Going one step further, a researcher might use the soundproofing codes as independent variables, and the number of noise complaints as the dependent variable in a step-wise multiple regression analysis to determine which soundproofing code is most predictive of noise complaints.

As a first step to performing such analysis, frequency of occurrence of each data element would normally be determined to see if it occurs a sufficient number of times in the file to warrant further analysis. The following sets of histograms, derived from the data base, show the frequencies for several data elements. The data elements used are:

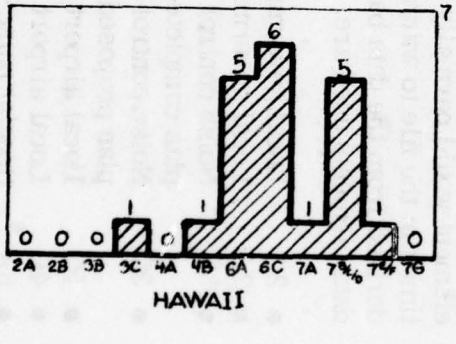

- 2A Local government actions: noise regulations,
- 2B Local government actions: land-use control,
- 3B Noise control activities: airport noise control and land-use compatibility plan completed,
- 3C Noise control activities: airport noise control and land-use compatibility plan proposed or under way,
- 4C Local airport use restrictions: aircraft type or weight restrictions,
- 4B Local airport use restrictions: curfew,
- 6A Special noise-sensitive areas near airport: Schools,
- 6C Special noise-sensitive areas near airport: residential areas,
- 6D-I Special noise-sensitive areas near airport: historic sites, national park or forest; religious structures or sites; concert hall(s) or public gathering place(s); recreation facilities; hotels, motels, resorts; other areas dissimilar to any of the above,
- 7A Number of noise complaints received annually: less than 5,
- 7B-D Number of noise complaints received annually: 5 to 50,
- 7E-F Number of noise complaints received annually: 50 to 200,
- 7G Number of noise complaints received annually: over 200

The first set of histograms shows the number of occurrences of each of the data elements by state within their FAA region. In the ACE Region (upper left of the page), six airports in the State of Iowa report that schools are located near the airport (i.e., the restriction use code - 6A - appears in the records of six Iowa airports in the data base).

The second set of histograms presents the data in a different format. Each chart represents all of the occurrences for a single data element by state. Since the number of airports varies substantially among the states, the data are presented in percentages to allow more meaningful comparisons. Thus, the first chart indicates that no airports in Alaska, 12.5% of the airports in Iowa, and 16.7% of the airports in Kansas report that local governments have adopted noise regulations (restriction use code 2A). Of particular, immediate interest will be the plots of codes 6A and 6C, which indicate incompatible land use (schools and residential areas) near a very high percentage of all airports.

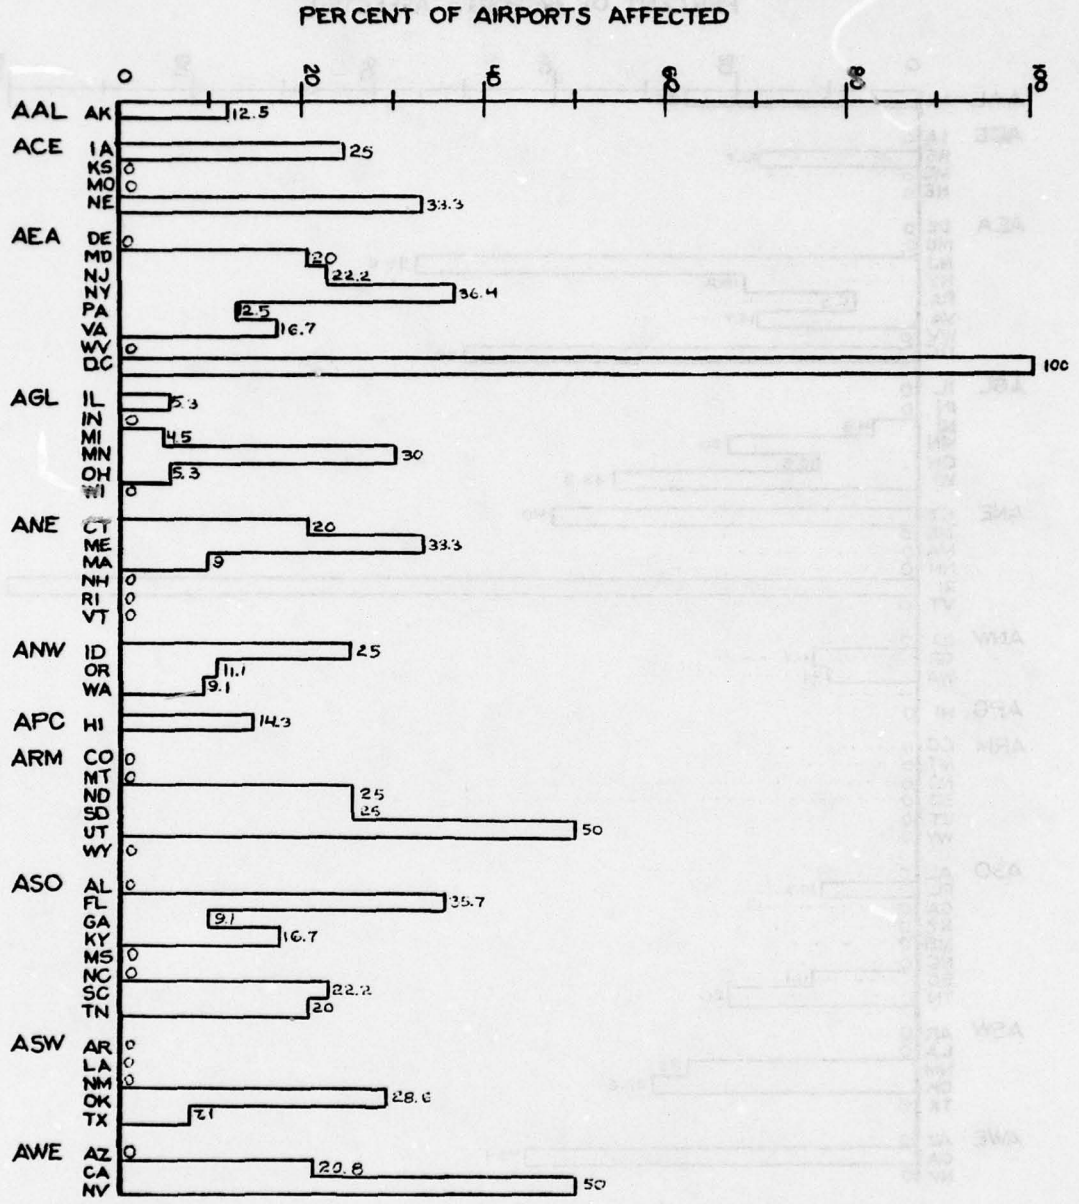

2A LOCAL GOVERNMENT ACTION: Noise Regulations

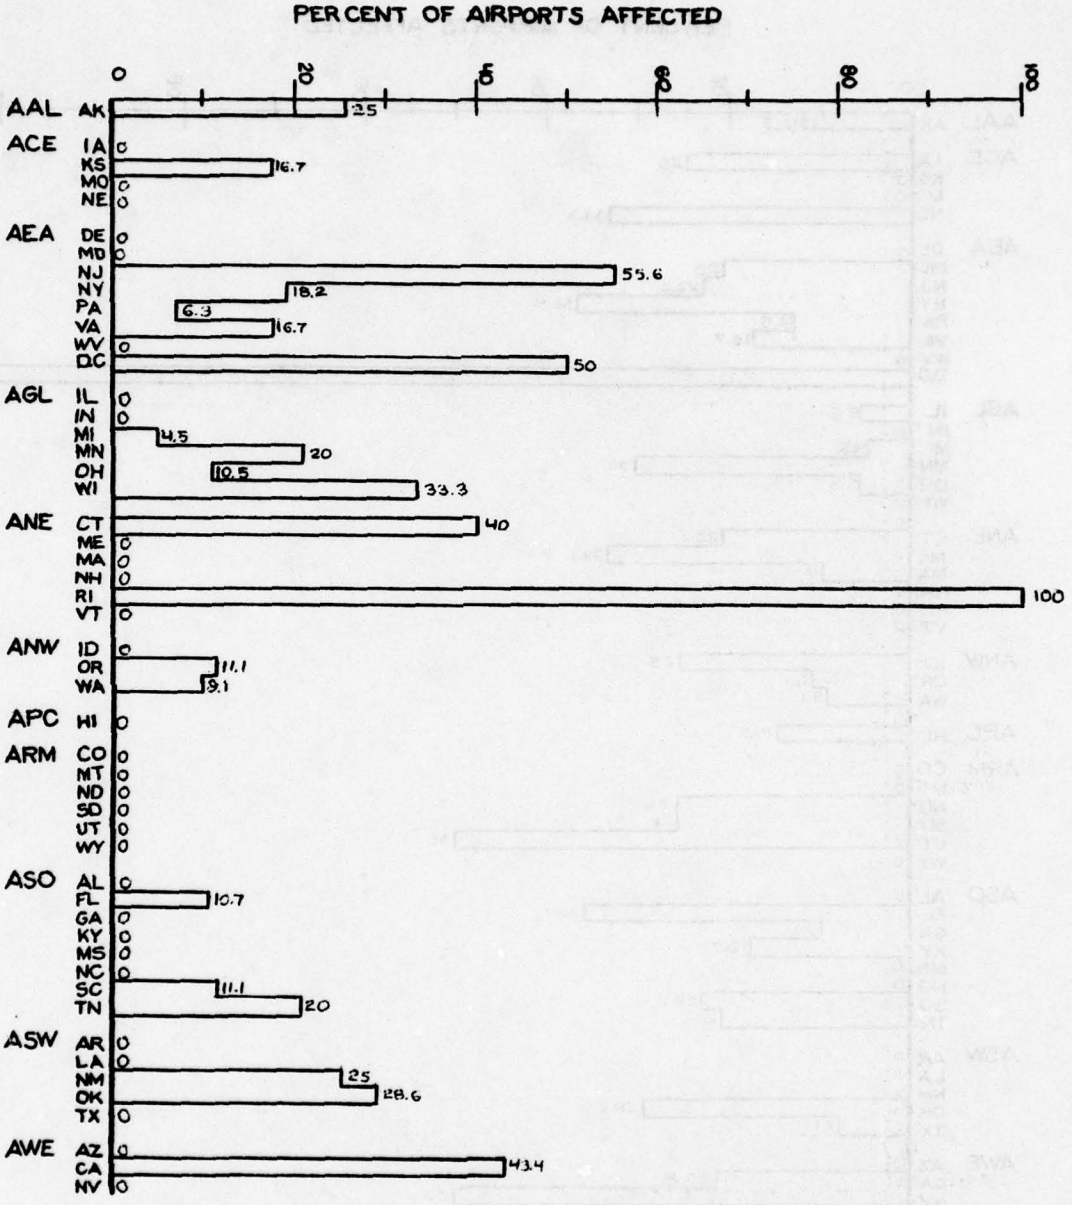

2B LOCAL GOVERNMENT ACTIONS: Land-Use Control

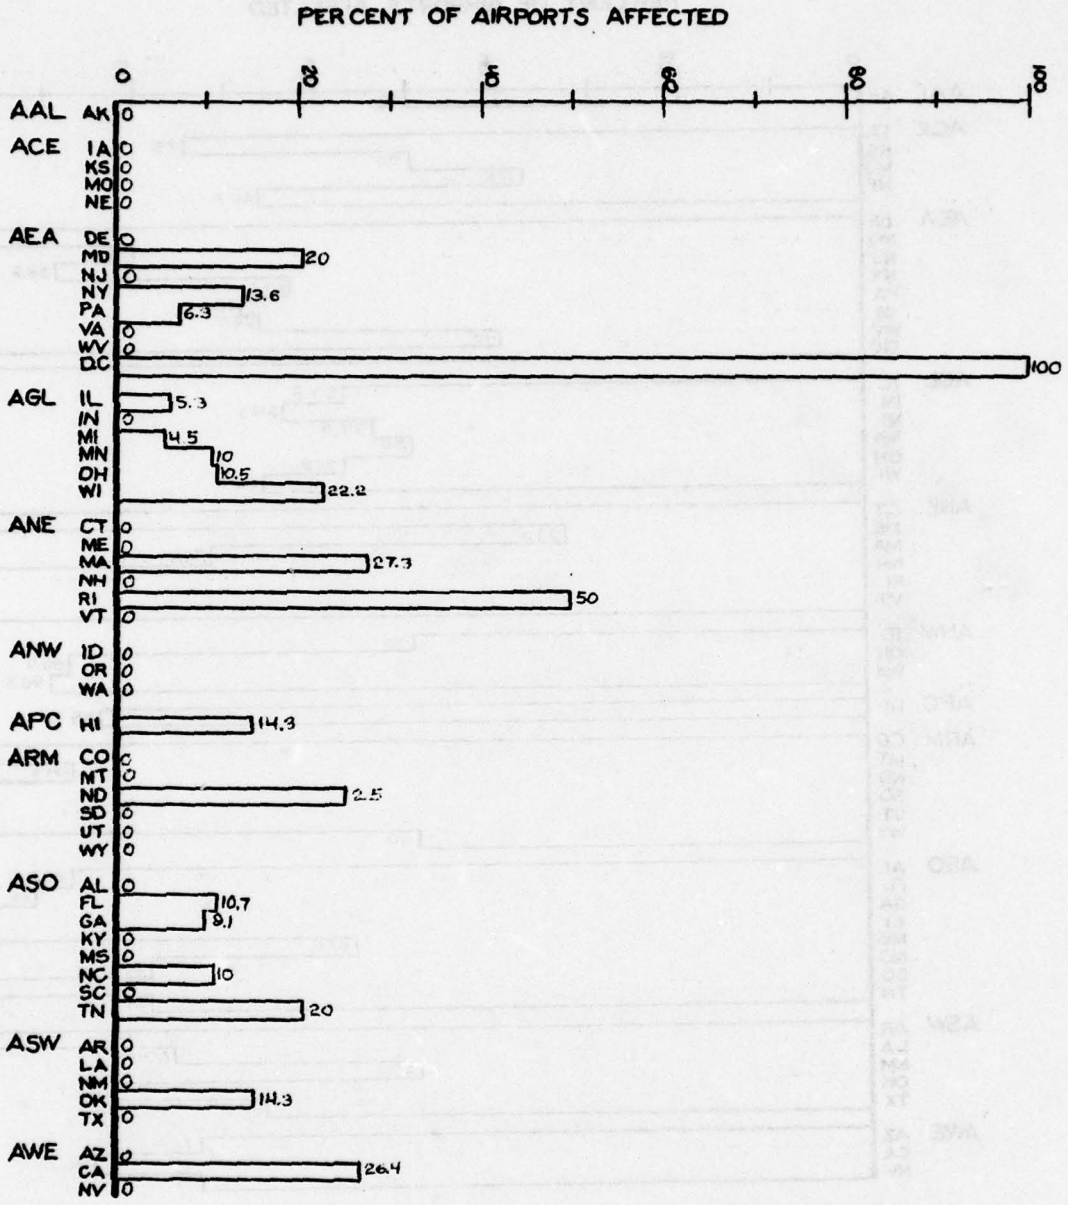

3B NOISE CONTROL ACTIVITIES: Airport Noise Control and Land-Use Compatibility Plan Completed

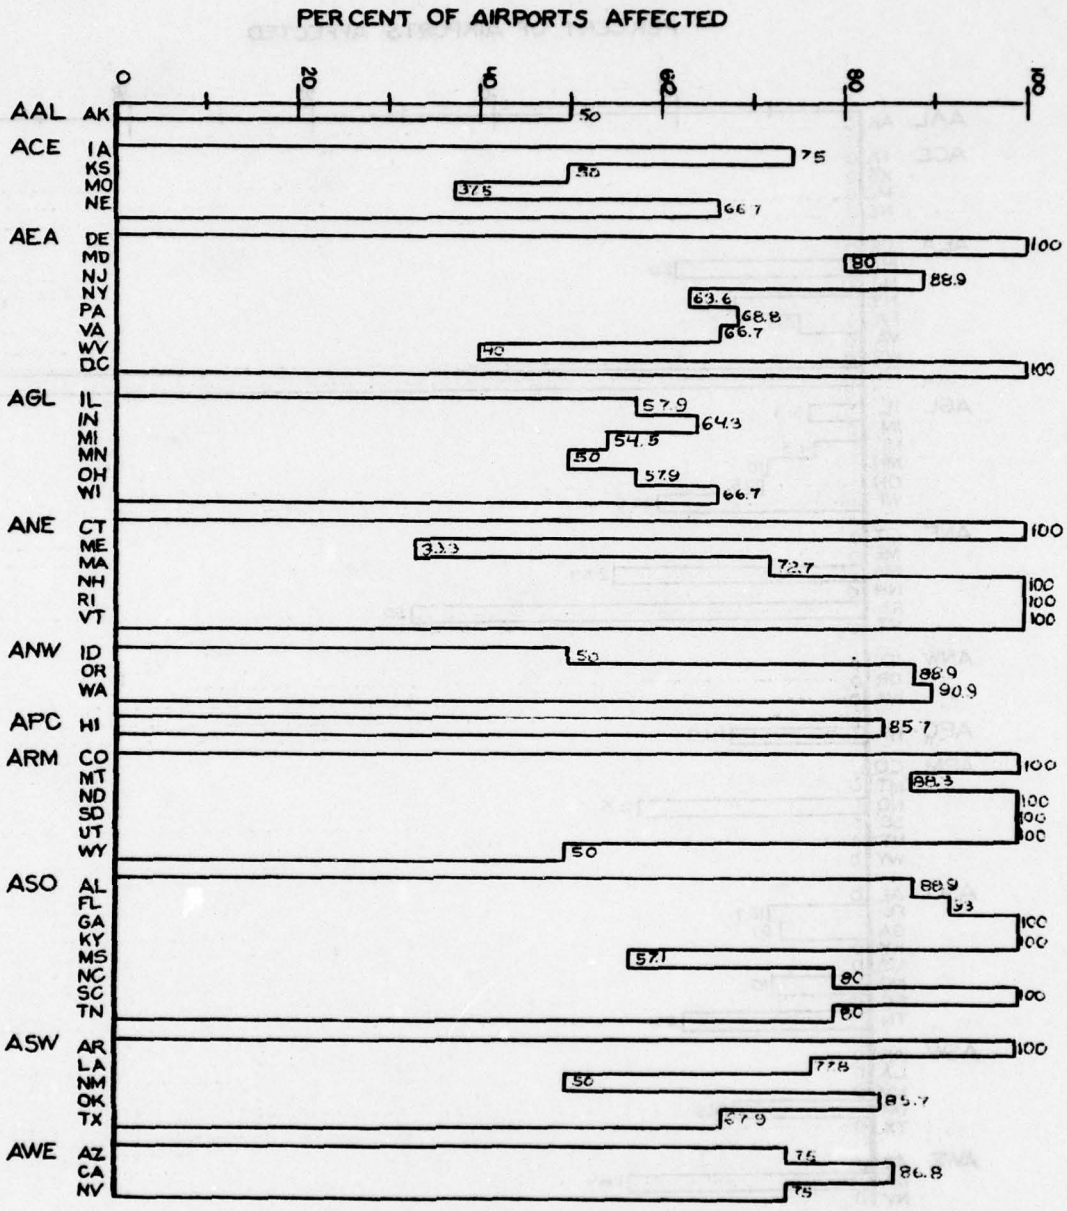

3C NOISE CONTROL ACTIVITIES: Airport Noise Control and Land-Use Compatibility Plan Proposed or Under Way

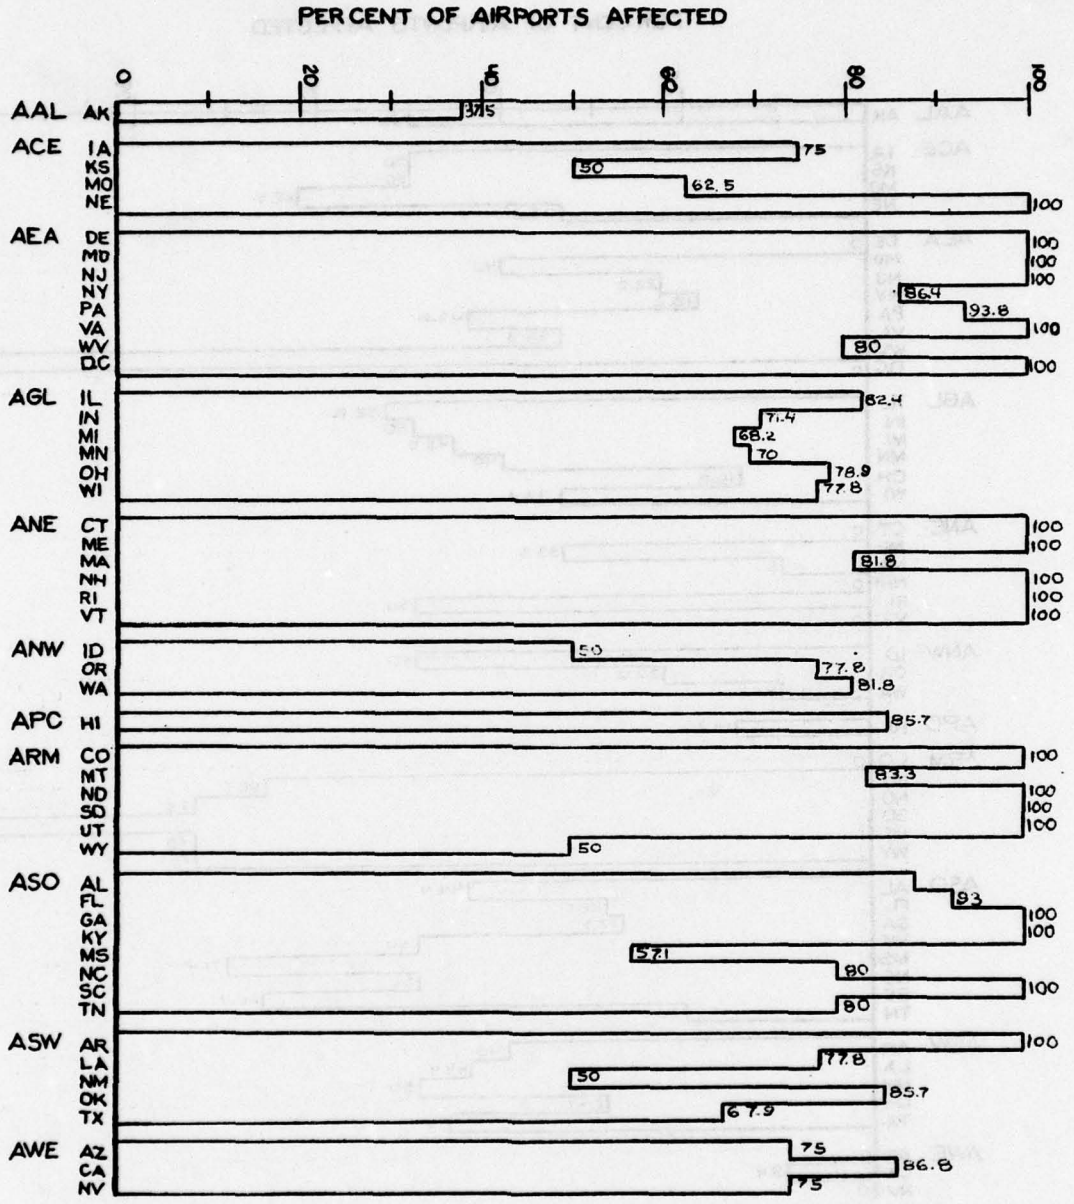

4A LOCAL AIRPORT USE RESTRICTIONS: Aircraft Type or Weight Restrictions

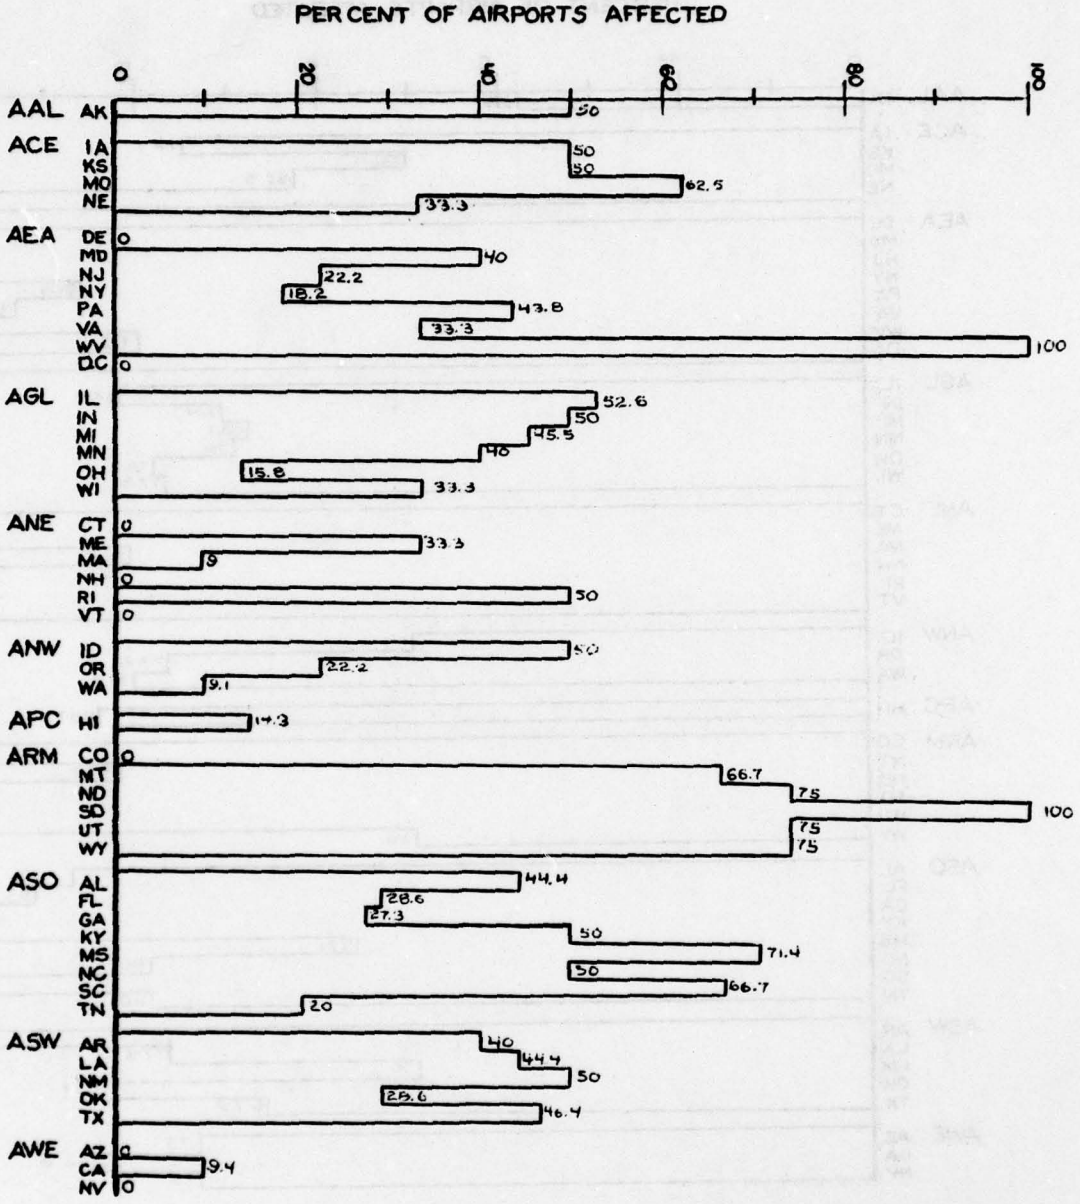

4B LOCAL AIRPORT USE RESTRICTIONS: Curfew

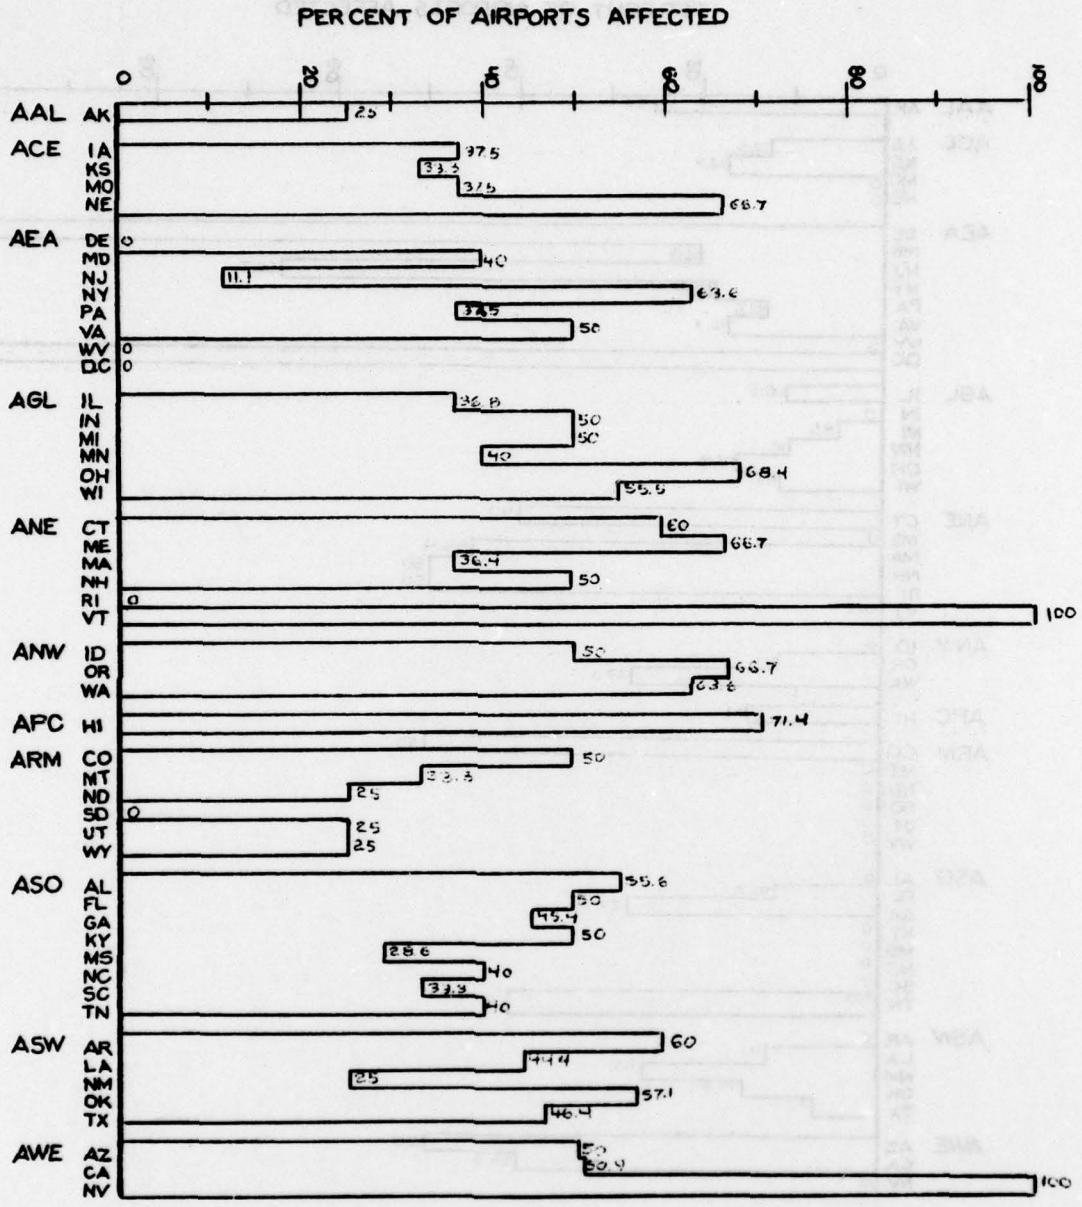

6A SPECIAL NOISE-SENSITIVE AREAS NEAR AIRPORT: Schools

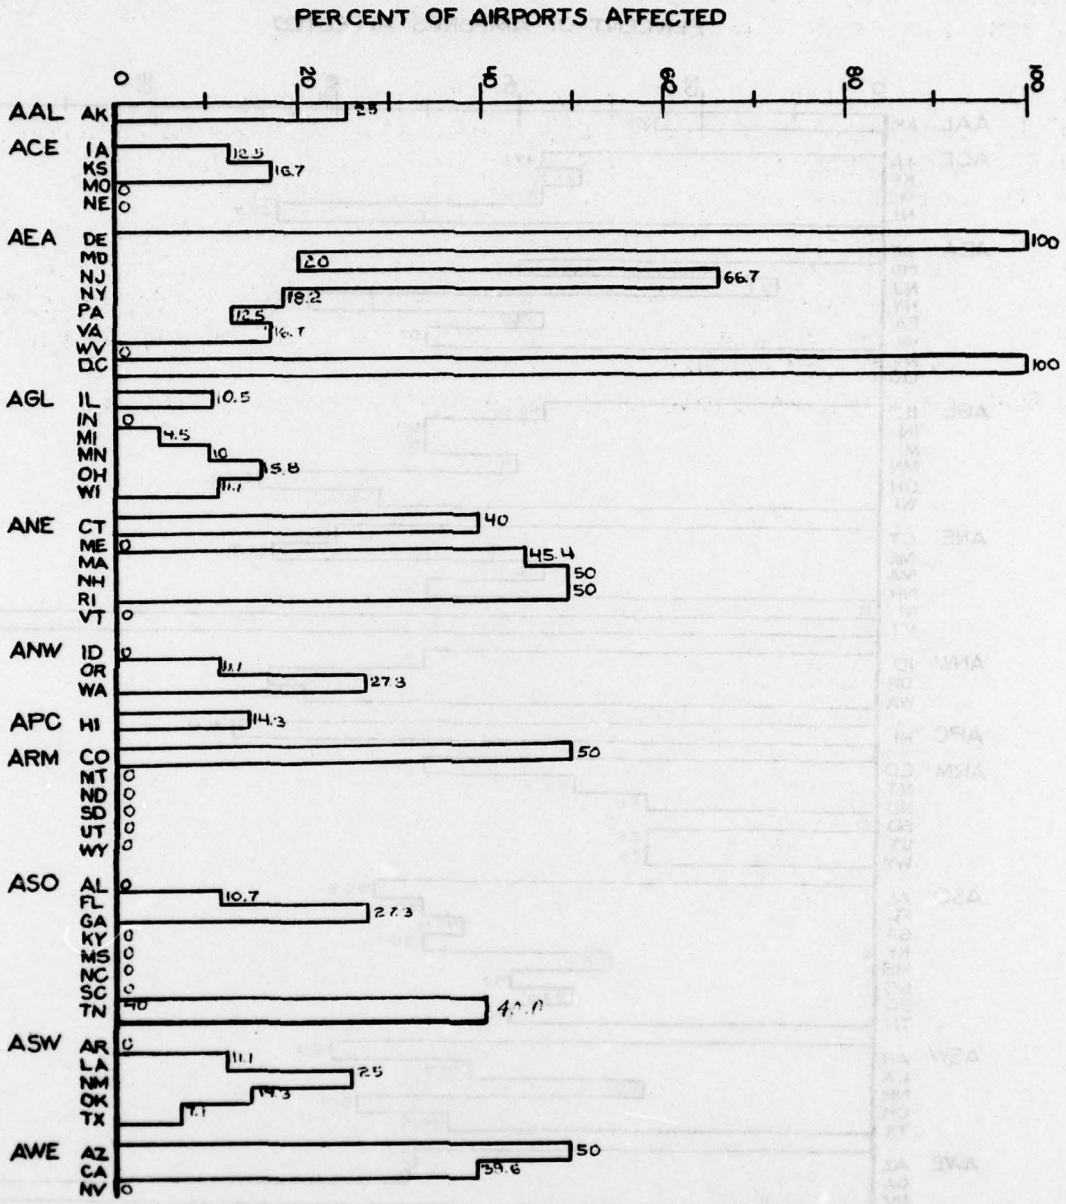

6C SPECIAL NOISE-SENSITIVE AREAS NEAR AIRPORT: Residential Areas

7A NUMBER OF NOISE COMPLAINTS RECEIVED ANNUALLY: Less Than 5

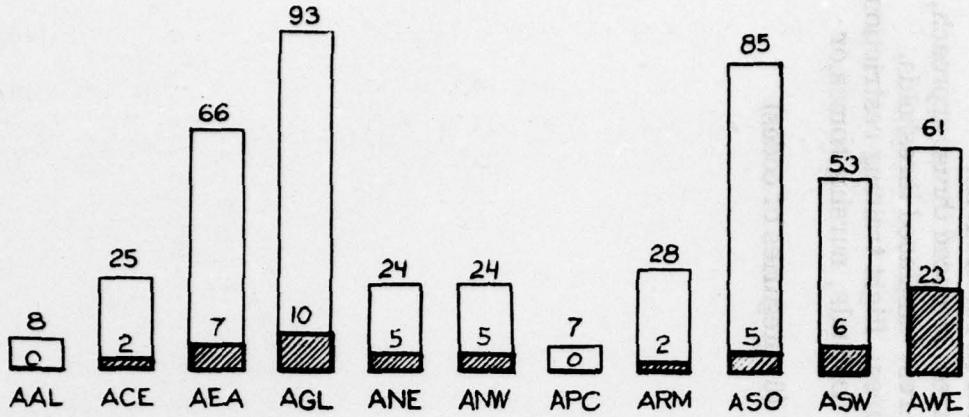

7 B/C/D NUMBER OF NOISE COMPLAINTS RECEIVED ANNUALLY: 5 - 50

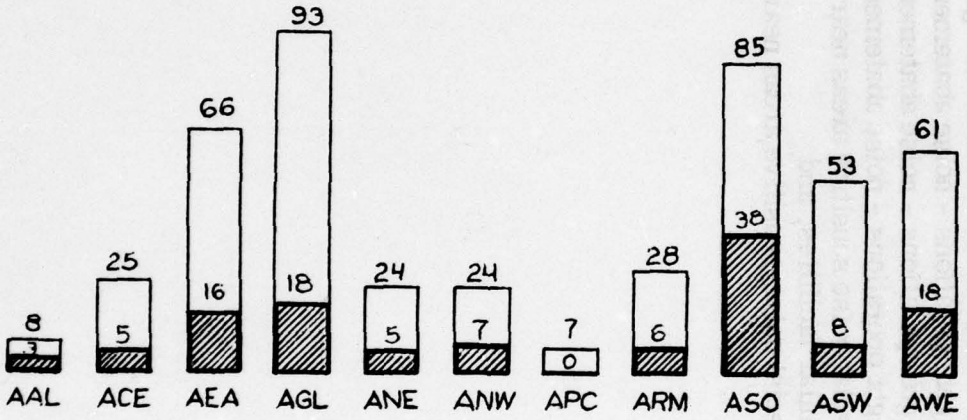

7 E/F/G NUMBER OF NOISE COMPLAINTS RECEIVED ANNUALLY: 50 and Over

The final set of histograms presents the raw data used for the previous set by region only. Each bar represents a single region. The number at the top of each bar is the total number of airports in that region, while the number inside each bar is the number of airports affected by the use code (given at the base of each histogram). Several use codes, other than those used in the previous sets of tables, have been added to this set. These are:

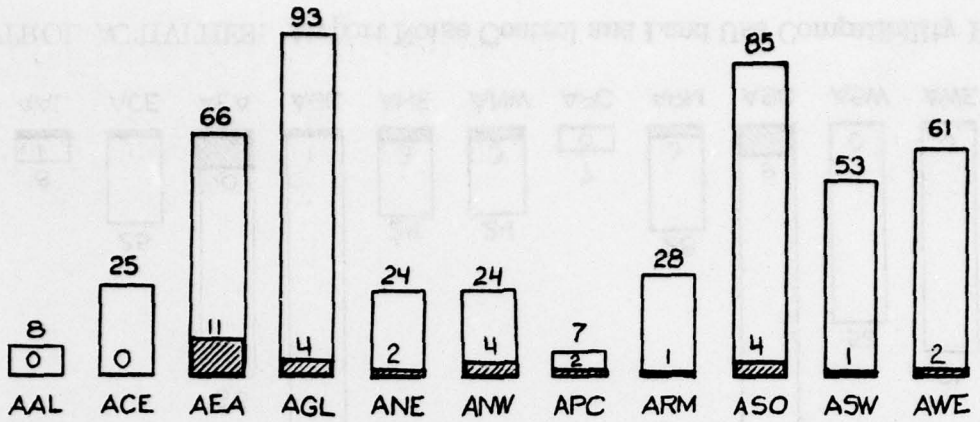

- 2C Local government actions: soundproofing programs,
- 2D Local government actions: airport actions for environmental protection,
- 3A Noise control activities: continuing noise committee at local level,
- 4D Local airport use restrictions: ground operation restrictions,
- 5A Flight operations - noise abatement procedures: reduced thrust approach,
- 5H Flight operations - noise abatement procedures: displaced thresholds,
- 5I Flight operations - noise abatement procedures: flight training restrictions,
- 6B Special noise sensitive areas near airport: hospitals, nursing homes, or similar facilities, and
- 6D-I Special noise-sensitive areas near airport (6 categories of codes)

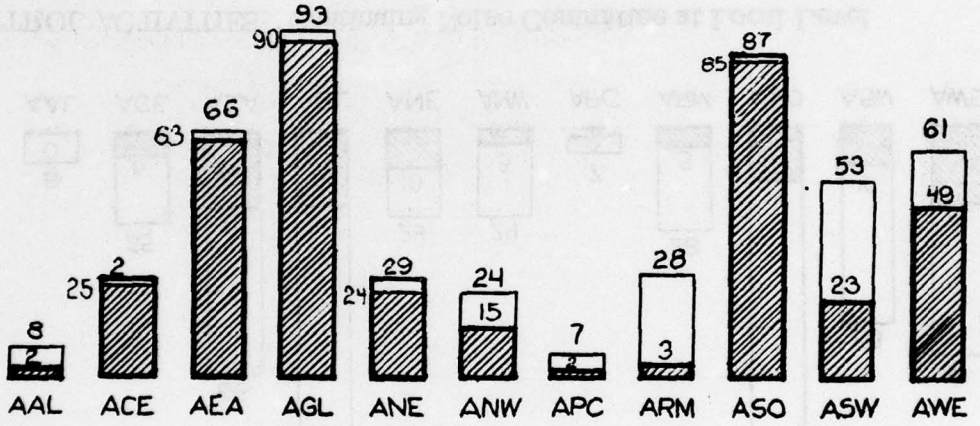

2A LOCAL GOVERNMENT ACTIONS: Noise Regulations

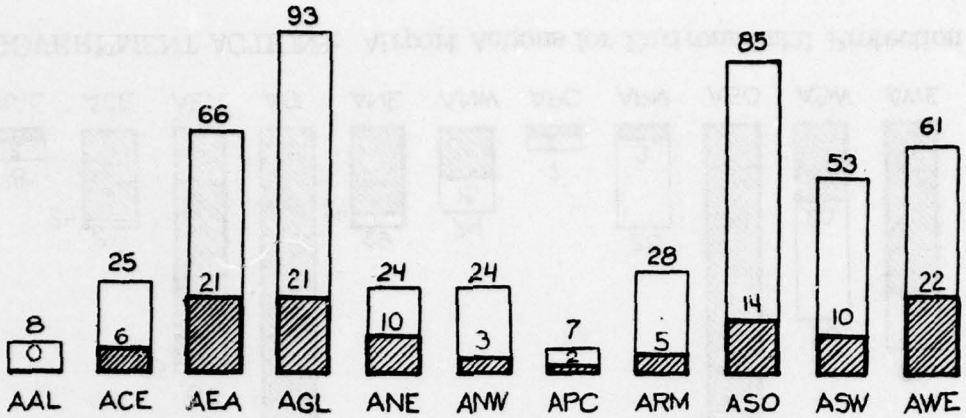

2B LOCAL GOVERNMENT ACTIONS: Land Use Control

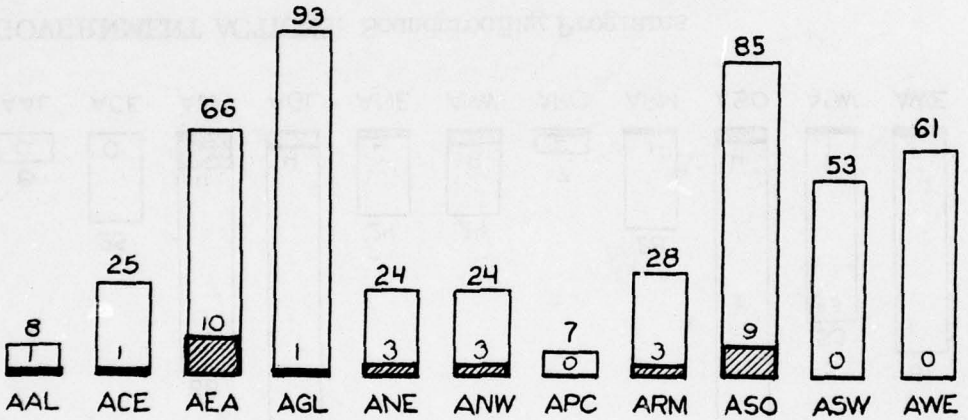

2C LOCAL GOVERNMENT ACTIONS: Soundproofing Programs

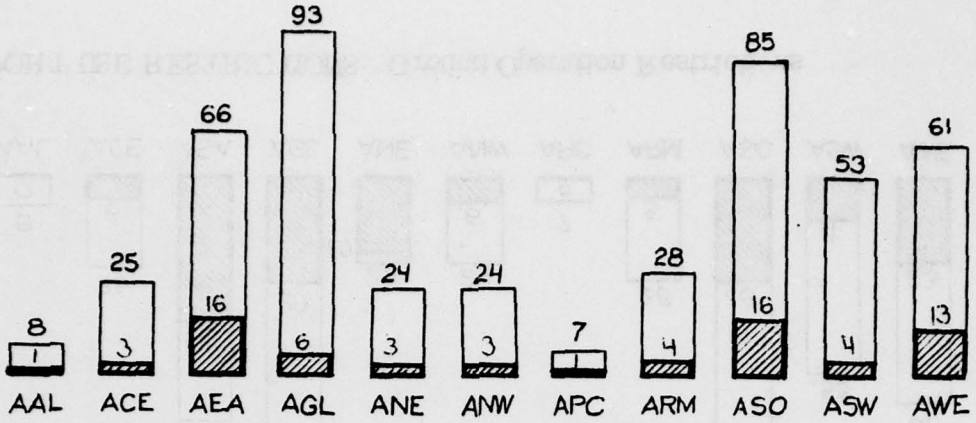

2D LOCAL GOVERNMENT ACTIONS: Airport Actions for Environmental Protection

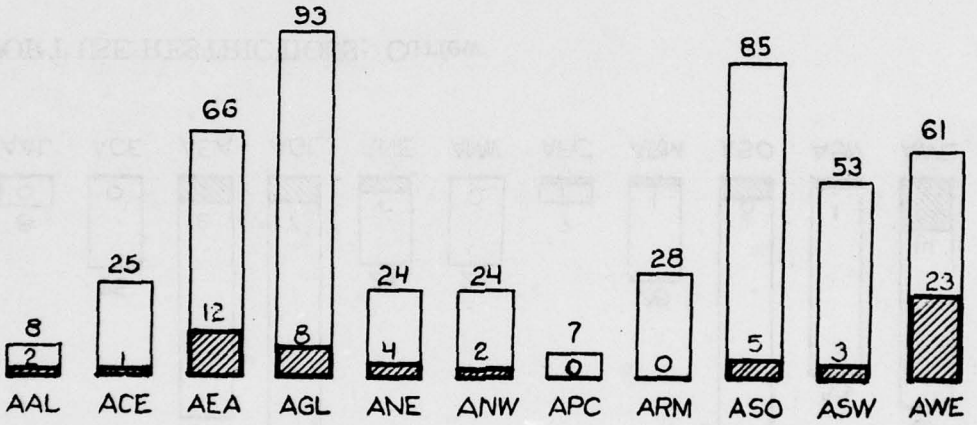

3A NOISE CONTROL ACTIVITIES: Continuing Noise Committee at Local Level

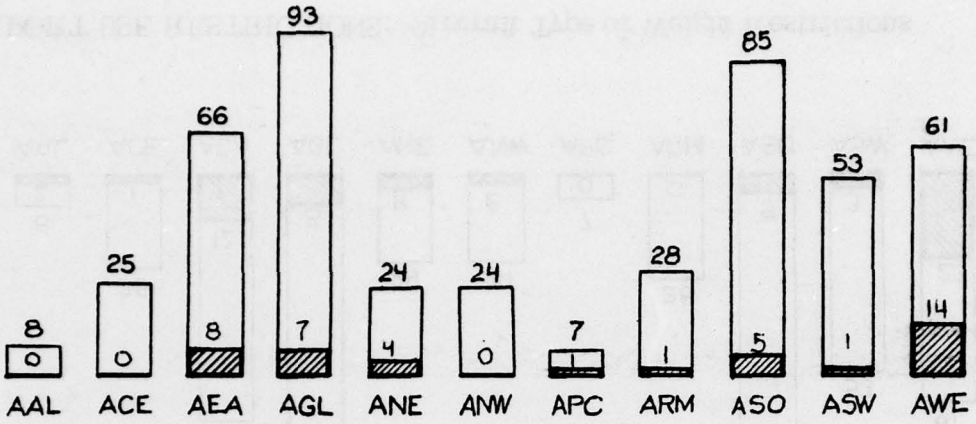

3B NOISE CONTROL ACTIVITIES: Airport Noise Control and Land Use Compatibility Plan Completed

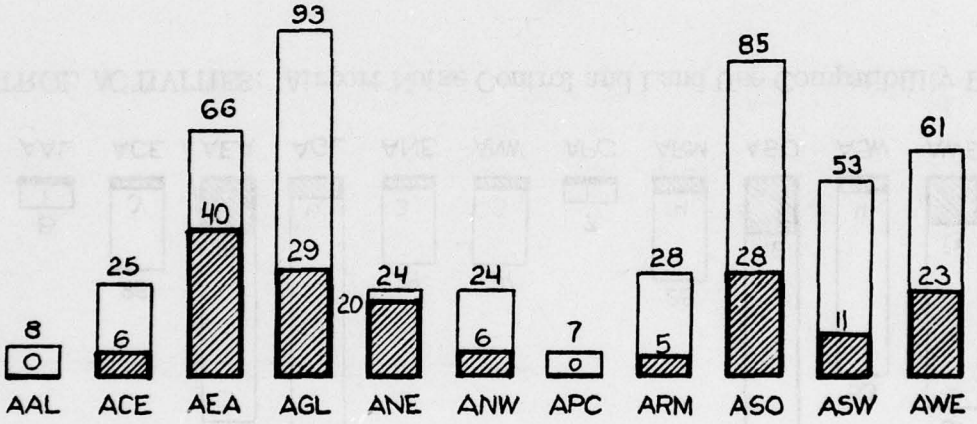

3C NOISE CONTROL ACTIVITIES: Airport Noise Control and Land Use Compatibility Plan Proposed or Under Way

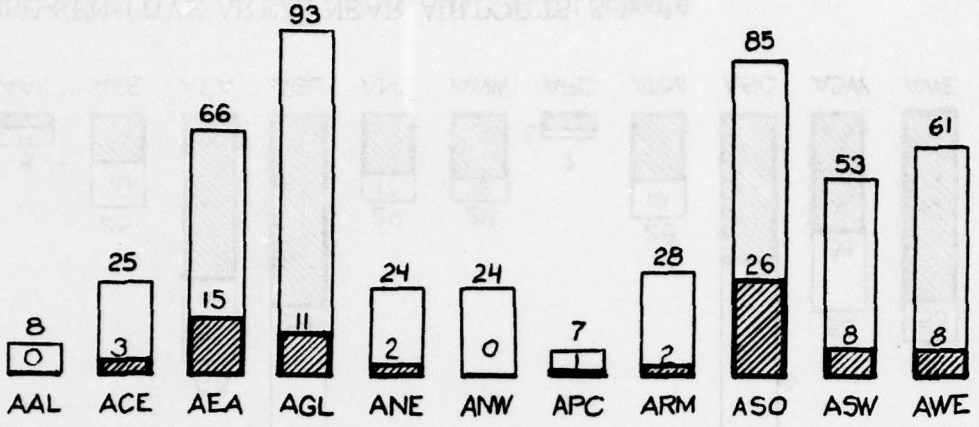

4A LOCAL AIRPORT USE RESTRICTIONS: Aircraft Type or Weight Restrictions

4B LOCAL AIRPORT USE RESTRICTIONS: Curfew

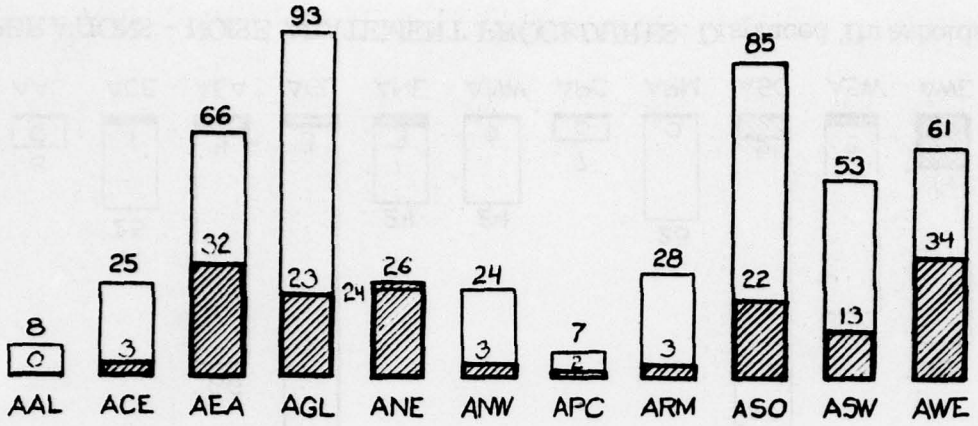

4D LOCAL AIRPORT USE RESTRICTIONS: Ground Operation Restrictions

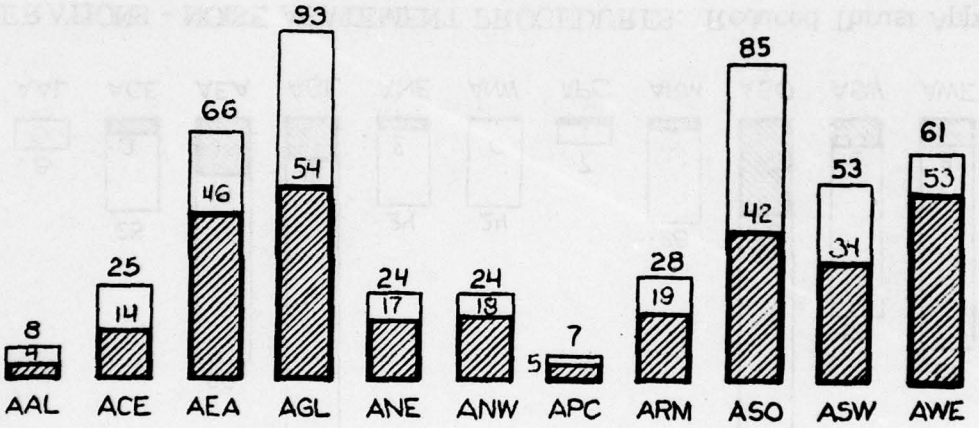

5A FLIGHT OPERATIONS - NOISE ABATEMENT PROCEDURES: Reduced Thrust Approach

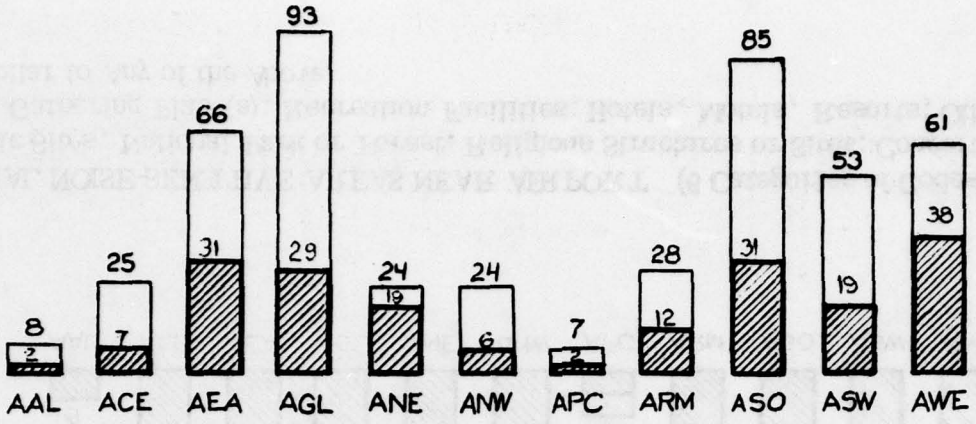

5H FLIGHT OPERATIONS - NOISE ABATEMENT PROCEDURES: Displaced Thresholds

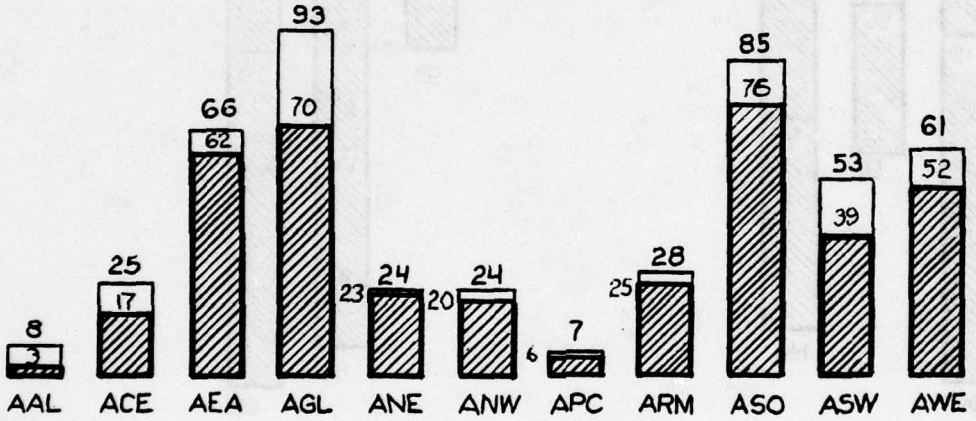

51 FLIGHT OPERATIONS - NOISE ABATEMENT PROCEDURES: Flight Training Restrictions

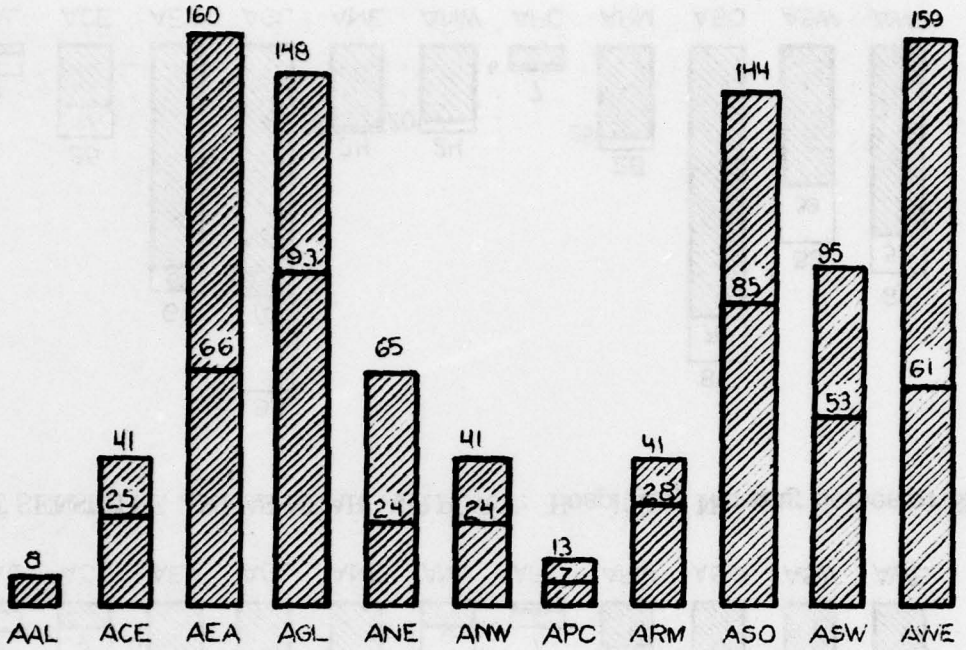

6A SPECIAL NOISE-SENSITIVE AREAS NEAR AIRPORTS: Schools

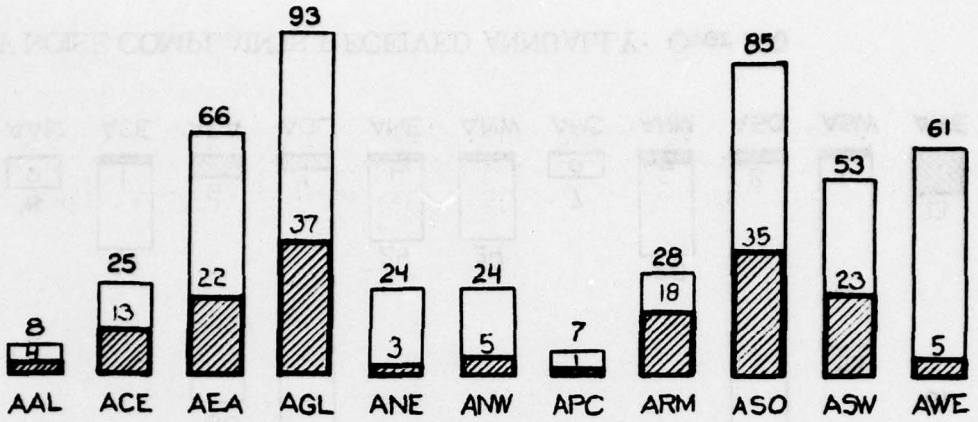

6B SPECIAL NOISE SENSITIVE AREAS NEAR AIRPORT: Hospitals, Nursing Homes or Similar Facilities

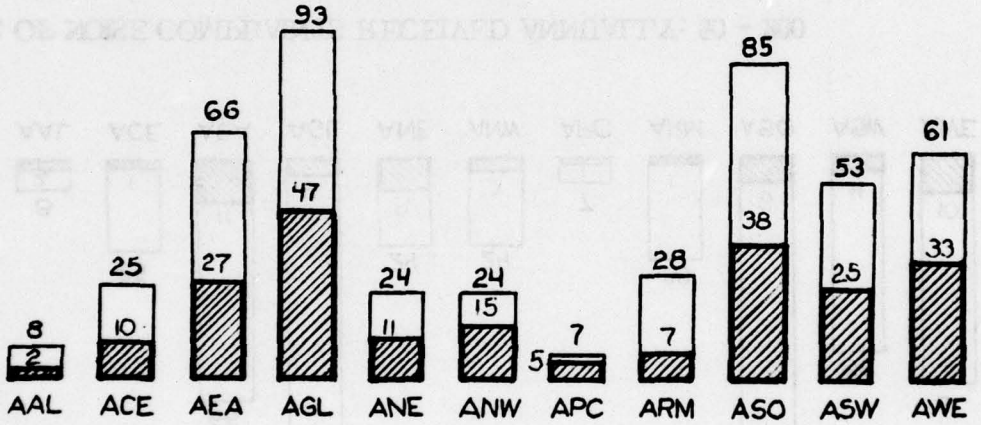

6C SPECIAL NOISE SENSITIVE AREAS NEAR AIRPORT: Residential Areas

6D - I SPECIAL NOISE-SENSITIVE AREAS NEAR AIRPORT (6 Categories of Codes)
Historic Sites, National Park or Forest; Religious Structures or Sites; Concert Hall(s) or Public Gathering Place(s); Recreation Facilities; Hotels, Motels, Resorts; Other Areas Dissimilar to Any of the Above.
